Bastiaan Lammers is tentatively available to make a presentation to the CAG on May 12. I will let you know when he confirms. You will see from my message below that I gave him some guidance on what the CAG wanted to hear about (based on your e-mails), but if you have anything further as the date gets closer, please let me know.

Alice,

Thank you for your e-mail. I am interested in presenting to the CAG meeting. I would tentatively like to schedule the presentation for the meeting of May 12, 2011. I have to coordinate with some people before I can make final commitment. I expect to be able to make these final commitments shortly.

Kind Regards, Bastiaan Lammers

Subject: Presentation to Passaic River Community Advisory Group (CAG)

Thank you for your offer to make a presentation to the Passaic River Community Advisory Group (CAG). I have relayed your offer to the CAG Chairs and they would like me to make arrangements with you for the presentation. Following are future dates of CAG meetings - please let me know if any of them fit into your or your colleagues' schedules (all meetings are 6-9pm in Newark, NJ).

April 14
May 12
June 9

The CAG is interested in hearing about your sediment processing technologies, as they relate to reducing the volume of dredged materials that would need to be disposed of. If you have experience with any sediment decontamination technologies anywhere in the world, then that would also be of particular interest to the CAG.

The CAG is arranging for these presentations to inform their evaluation of the alternatives for cleanup that are being considered for the sediments of the lower 8 miles of the Passaic River. Those alternatives are No Action, Deep Dredging (dredge out all of the contaminated silts), and Capping with Some Dredging (dredge enough silts so that a sand cap would not cause additional flooding and to allow for a navigation channel). The Deep Dredging alternative would generate approximately 11 million cubic yards, and the Capping with Some Dredging alternative would generate approximately 4.2 million cubic yards. The dredged materials disposal options included in each alternative are off-site disposal (sending materials to landfills out of state), contained aquatic disposal (CAD) in Newark Bay, and local decontamination facility with beneficial re-use.

Please let me know if you are still interested in making a presentation and whether any of the dates above work for you.

Let me know if you have any questions at 212-637-4427.
